

Hello here another report from us!

Yesterday, at the 21st of June there was the first day on the calendar from this summer. It was a really good one. We had beautiful weather with temperatures up to 28 degrees and, that's more important for me, we had outstanding opportunity to work on 10GHz via rainscatter. Of course, I know that there some people working quite often by this kind of propagations, but for us it is seldom, we don't have our rig at this place where we are living or doing our job.

We had much fun to work with the SK7MW - group and many other stations on 3cm. The odx was n o t 7MW, because there is also OZ1CTZ from JO46 in the log! Anyway, many stations were worked and we will look forward to the next opening! About the silence on 23cm I have to explain that we took down the dish from the tower and started to restore it, because it was running for many years and gave us much fun.

When I was checking the OE9PMJ- feeder I recognized the reason for the loosing performance in the last time. I was very surprised to find a nest from the birds in the Horn!

At present the Horn is cleaned and new coloured. As you can see below, also the dish will be finished soon. Helmut, DJ2NR has done this job very well!

Martin, DL2AX and myselfe nearly finished the "water protection" from the new part of the hut!

My wife Doris prepares the stove for the Tuesday- evening barbeque

After working hard normally we relax by the famous "Ahornberger" and discussing about anything

Finally I will report that we decided that the annual Ahornberg – meeting will be at July the 23rd of this Year.

My special thanks have to go to Thomas for taking the pictures!
